

MCSA-P01 — PROJECT EVIDENCE REPORT

New Office Infrastructure

Prepared by:
Manisha Chaudhari

Lab Environment: VMware Virtual Environment
Operating System: Microsoft Windows Server 2016
Domain: Aster.com

Technologies Implemented

- Active Directory Domain Services (AD DS)
- DNS
- DHCP
- SMB File Sharing
- NTFS Permissions
- Group Policy
- Windows Server Backup
- Windows Firewall
- Event Logs

Project Focus

Centralized identity management • Network services • File security • Group Policy • Backup & Recovery

Project Type: Hands-on Training / Lab Project
Server Infrastructure: AST-DC01, AST-FS01, AST-BK01, AST-CL01

Project Overview

1. Project Overview

Project Name

MCSA-P01 – New Office Infrastructure

Objective

The objective of this project was to build and validate a Windows Server 2016 infrastructure for a simulated organization using the **Aster.com** domain.

The project focuses on centralized user management, network services, controlled file access, security policies, and data protection.

The project scenario addresses common office IT problems such as users being unable to access required files, users having access beyond their job responsibilities, accidental file deletion, and the need for reliable recovery.

Business Scenario

The simulated organization required a centralized infrastructure to:

- Provide named user accounts through Active Directory.
- Control access to departmental files.
- Provide network configuration through DHCP.
- Provide DNS name resolution.
- Apply organization-wide security policies.
- Protect important files using backup and recovery.
- Maintain appropriate access to Finance, HR and Operations resources.

Infrastructure Components

Server	Role	IP Address
AST-DC01	Domain Controller, AD DS, DNS, DHCP	192.168.50.10
AST-FS01	File Server / SMB Shares	192.168.50.20
AST-BK01	Backup Server	192.168.50.30
AST-CL01	Client / Validation Machine	192.168.50.90

Main Implementation Areas

1. Active Directory

Created the Aster.com domain structure, organizational units, users and security groups.

2. DNS

Configured the Aster.com DNS zone and server records to support name resolution.

3. DHCP

Configured a DHCP scope with the address range **192.168.50.100–192.168.50.149**.

4. File Services

Created departmental folders for **Finance, HR and Operations** and configured SMB shares.

5. NTFS Permissions

Applied role-based permissions using security groups to control access to departmental data.

6. Group Policy

Configured password and account-lockout policies to improve account security.

7. Backup & Recovery

Configured Windows Server Backup and validated successful backup and file-recovery operations.

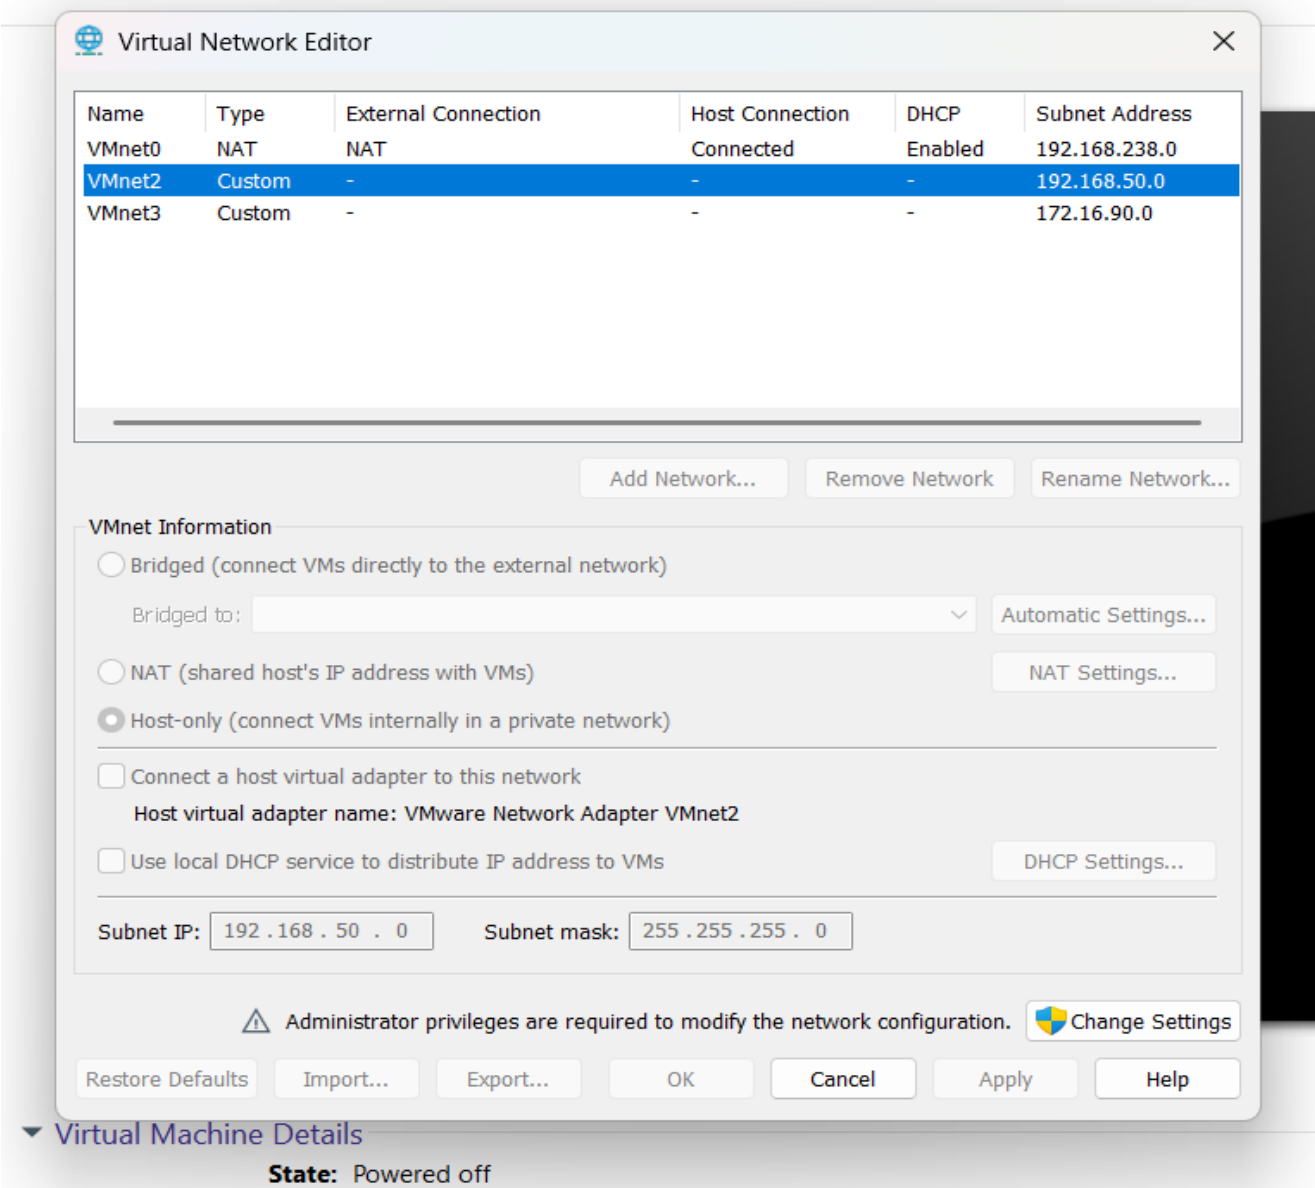

Project Outcome

The completed lab demonstrates an integrated Windows Server environment where **identity, DNS, DHCP, file access, security policies and backup/recovery** work together as core IT infrastructure components.

Skills Demonstrated

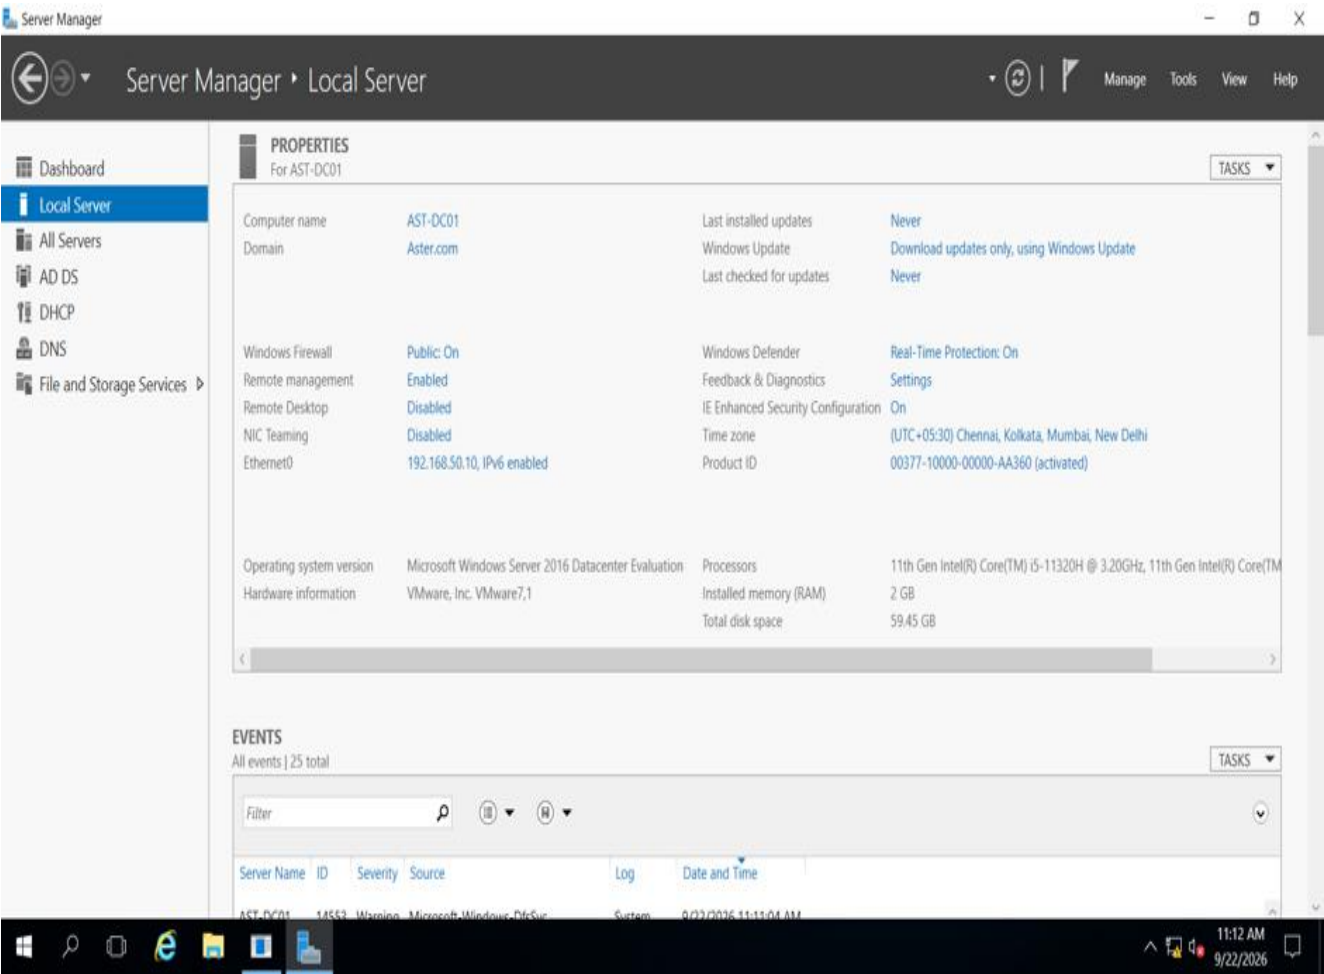

- Windows Server Administration
- Active Directory Administration
- DNS & DHCP Configuration
- User and Group Management
- SMB File Sharing
- NTFS Permission Management
- Group Policy Configuration
- Backup & File Recovery
- Basic Troubleshooting
- VMware Virtual Lab Administration

B01 — Prepare the isolated virtual network
-bit

B02 — Build AST-DC01

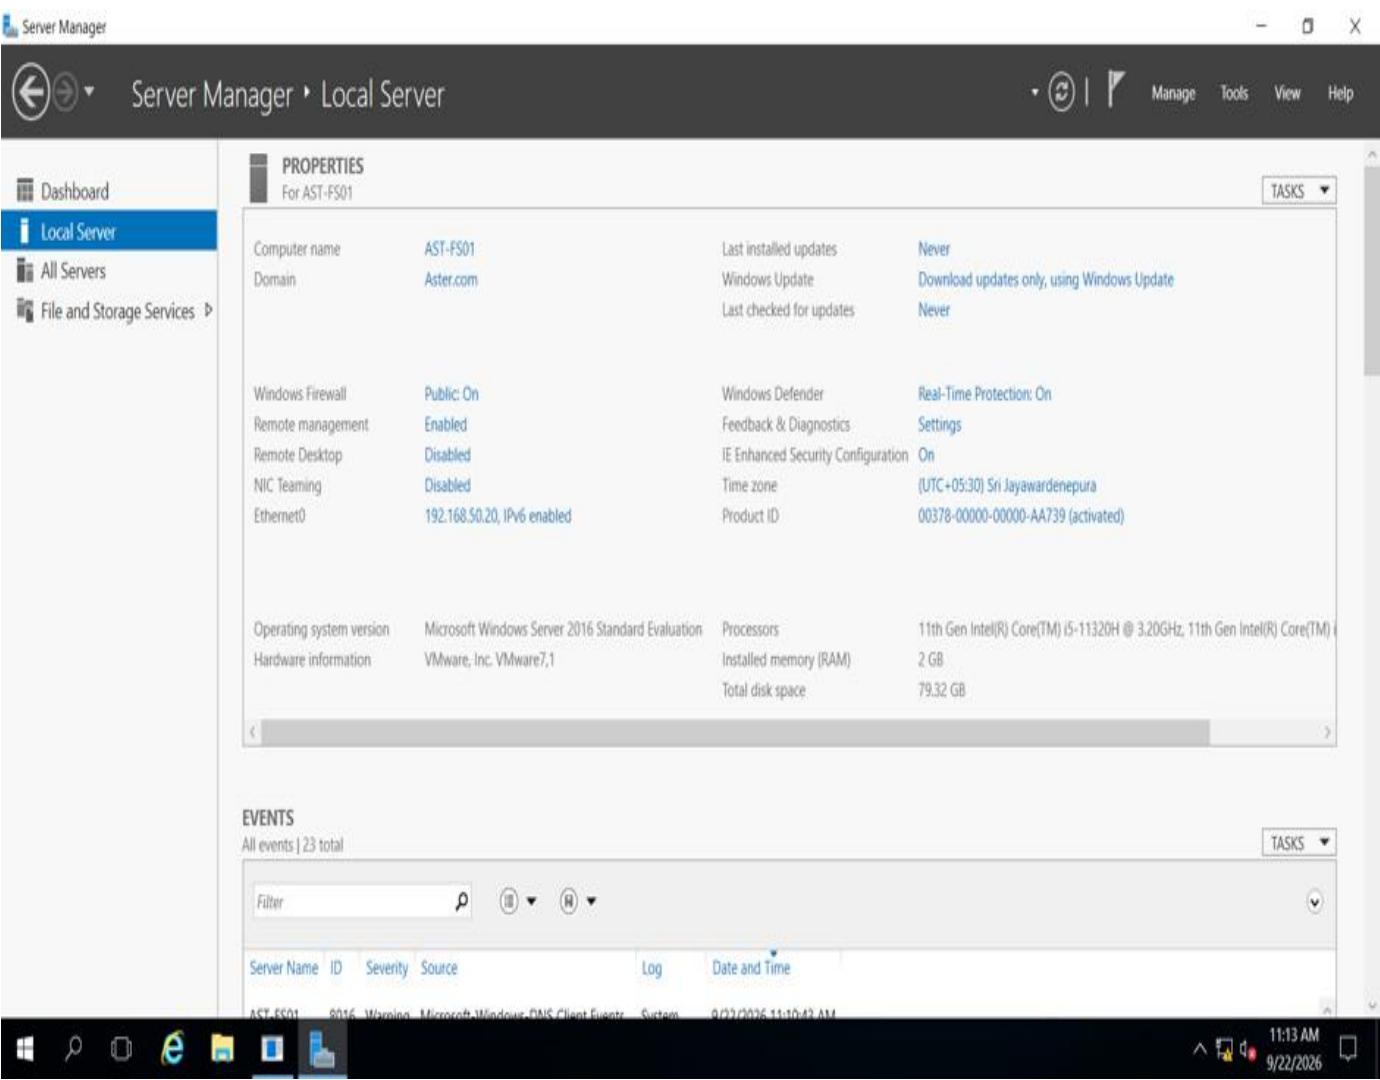

Supplied screenshot evidence:

AST-DC01 Server Manager.

B03 — Build AST-FS01

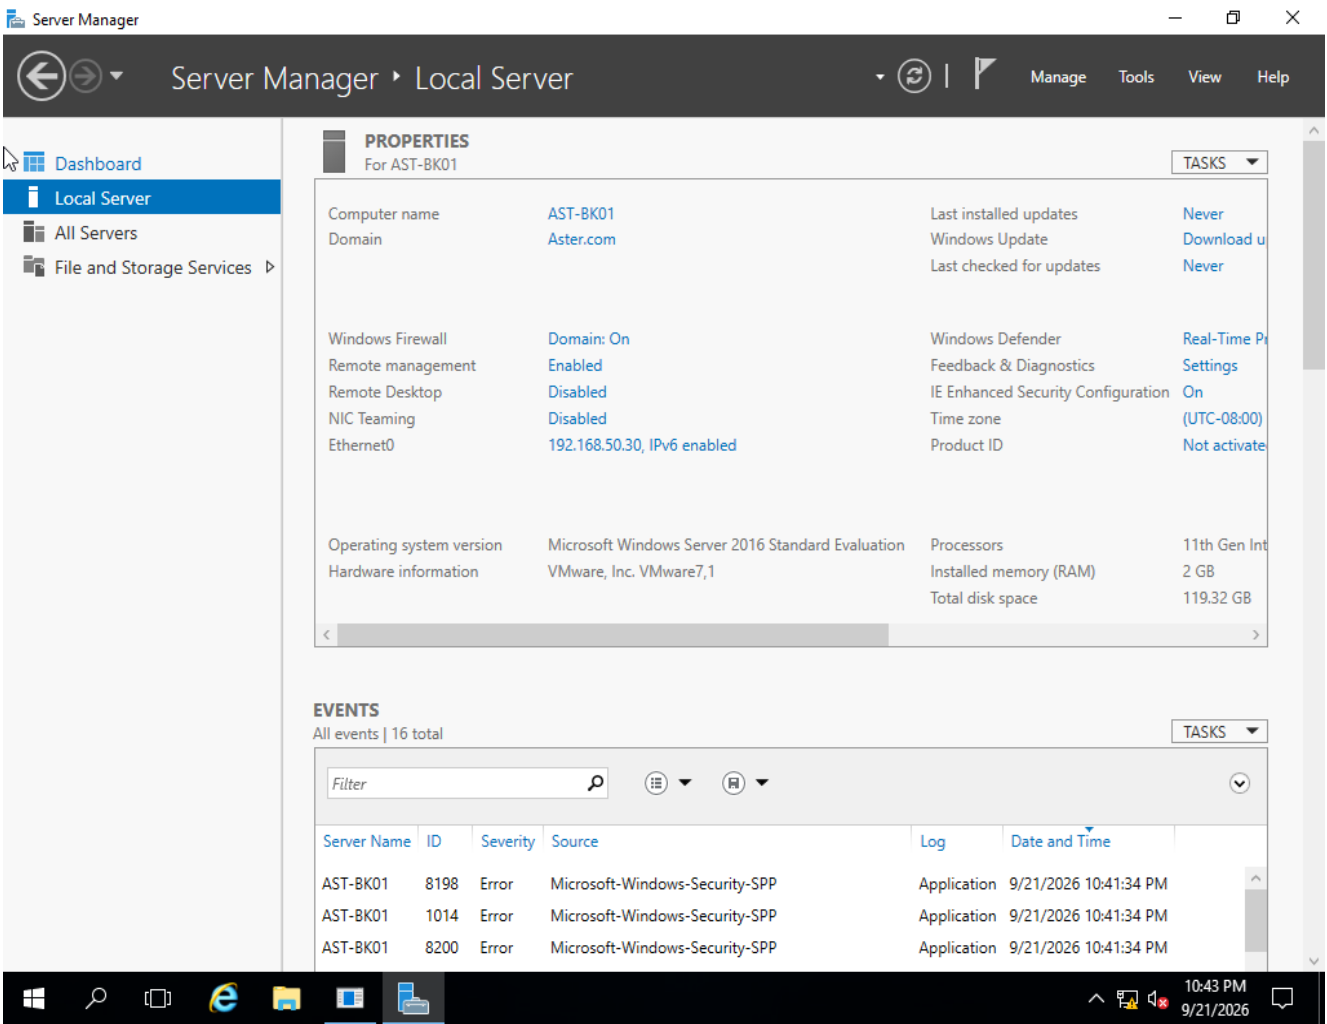

Supplied screenshot evidence:

AST-FS01 Server Manager.

B04 — Build AST-BK01

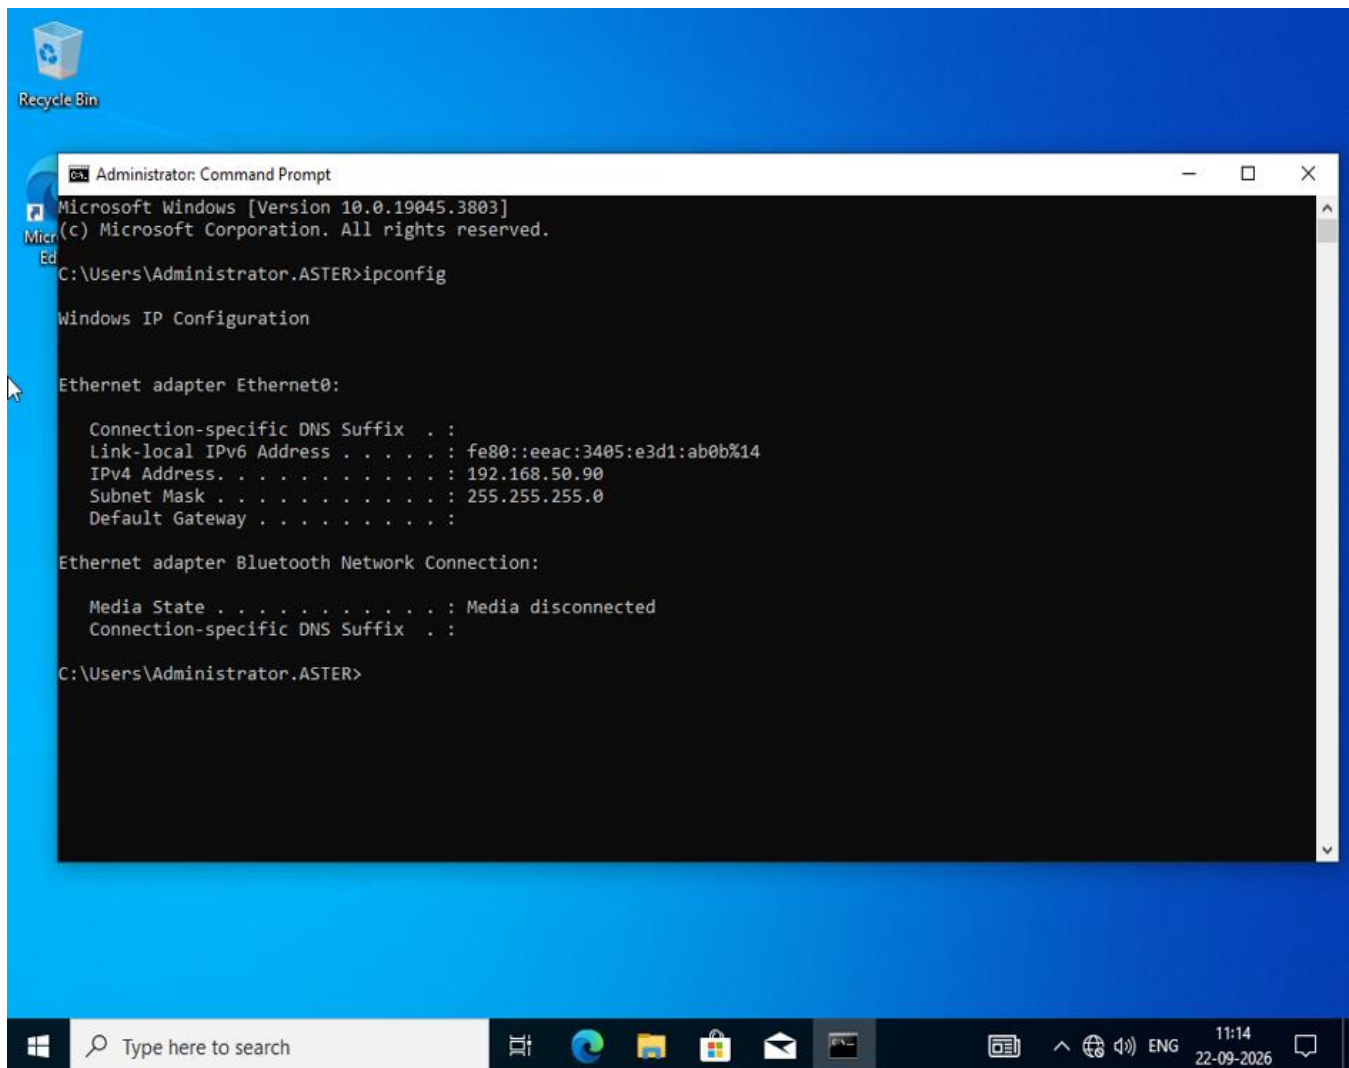

Supplied screenshot evidence:

AST-BK01 Server Manager.

B05 — Build AST-CL01

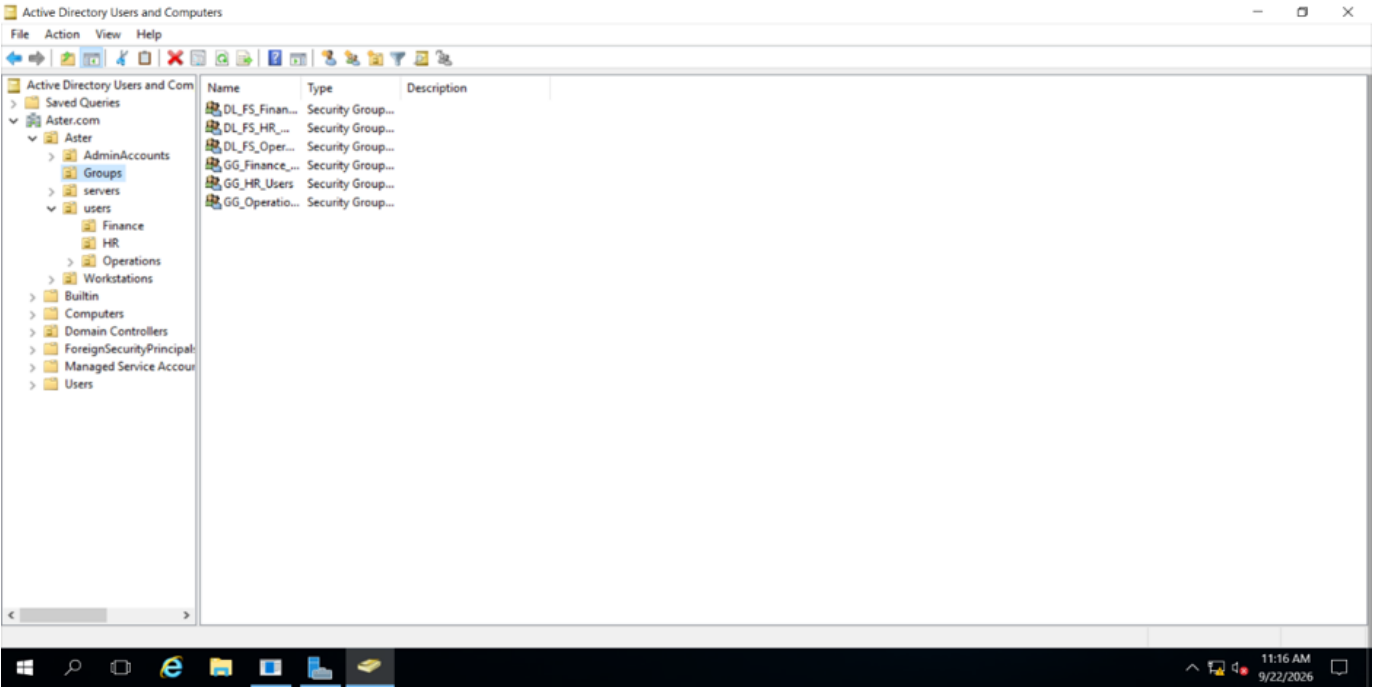

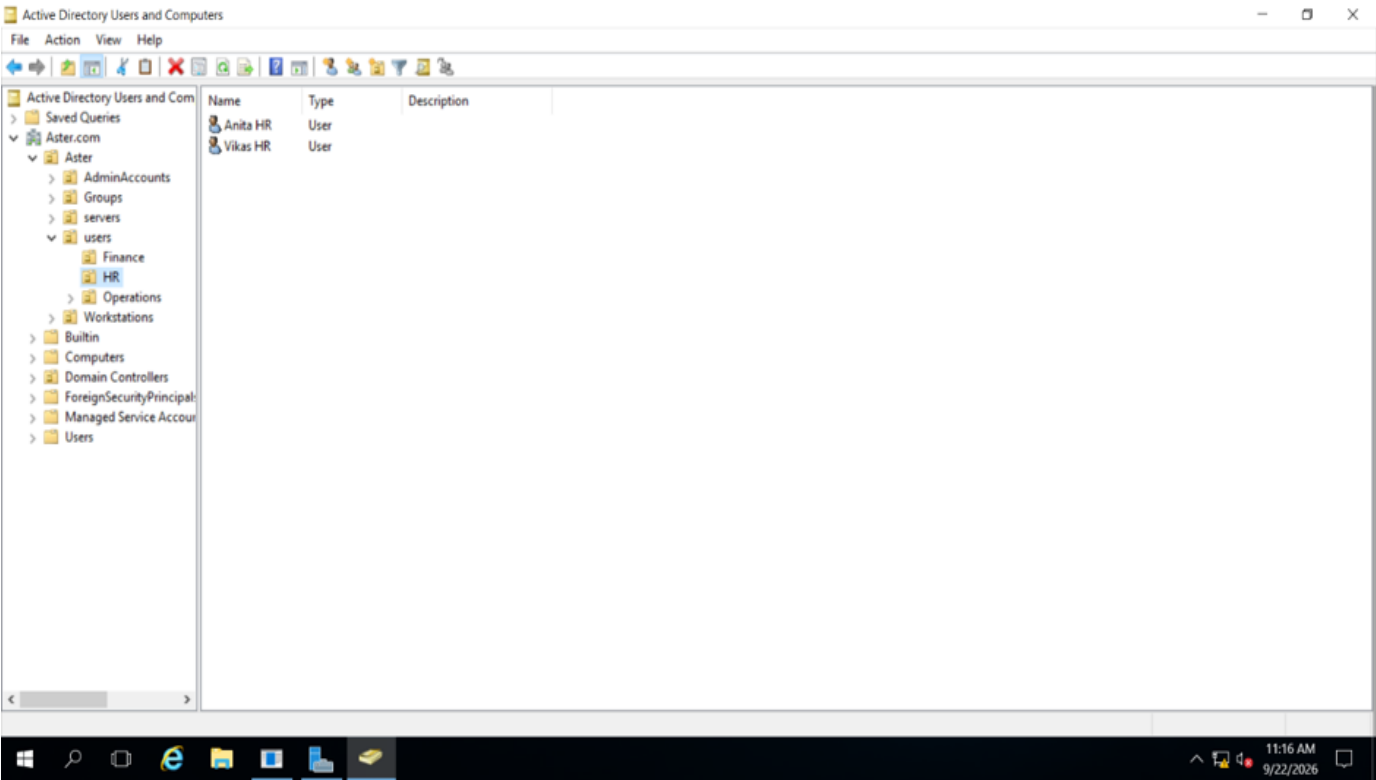

Supplied screenshot evidence:

Windows client desktop.

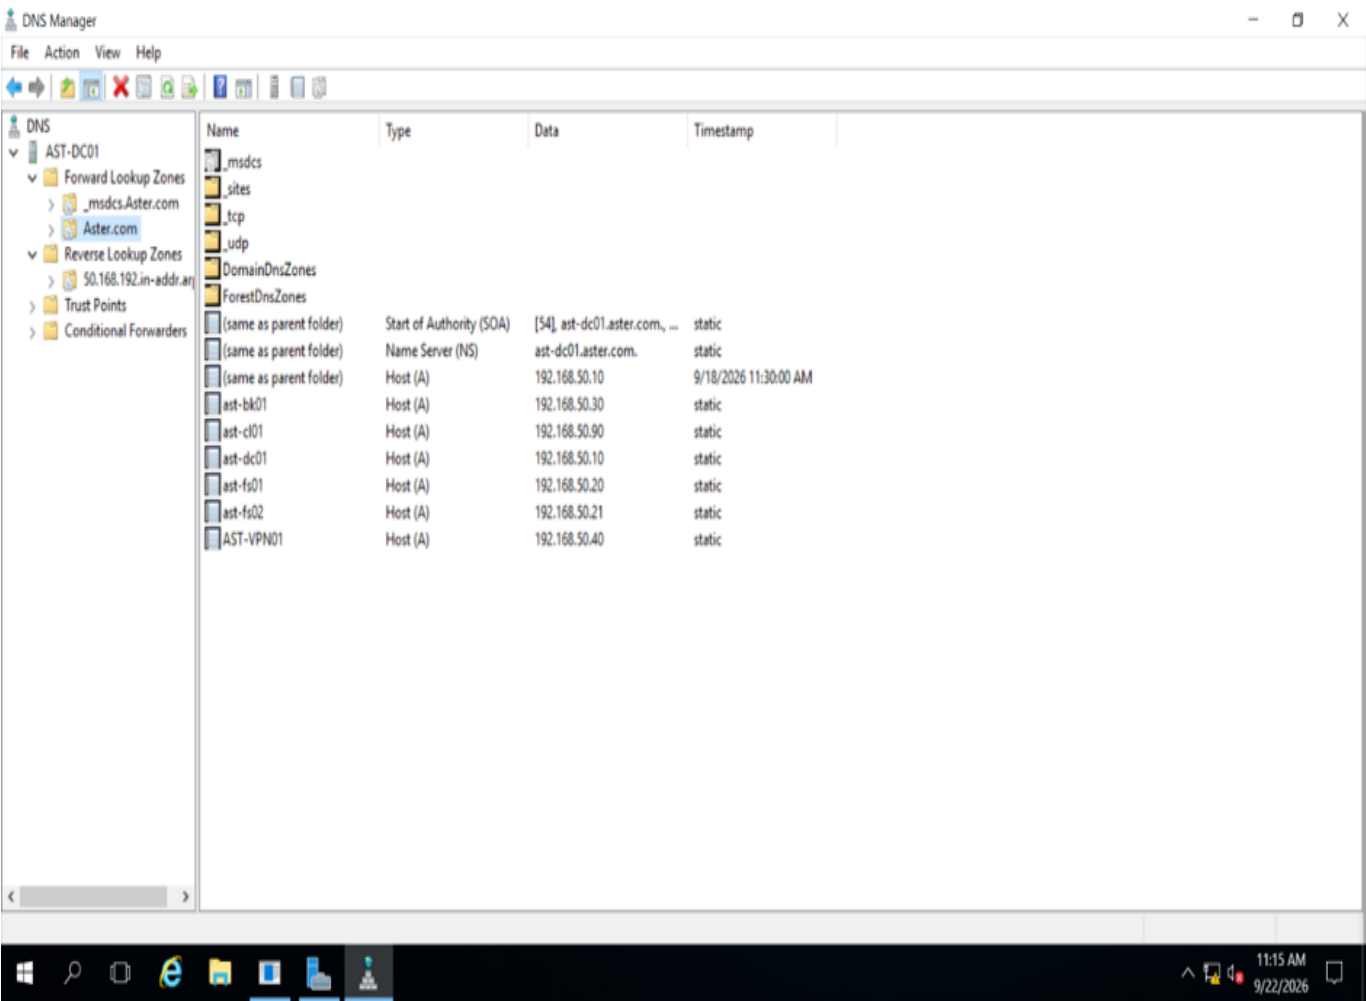

Client Command Prompt / ipconfig network evidence.

B06 — Install Active Directory Domain Services

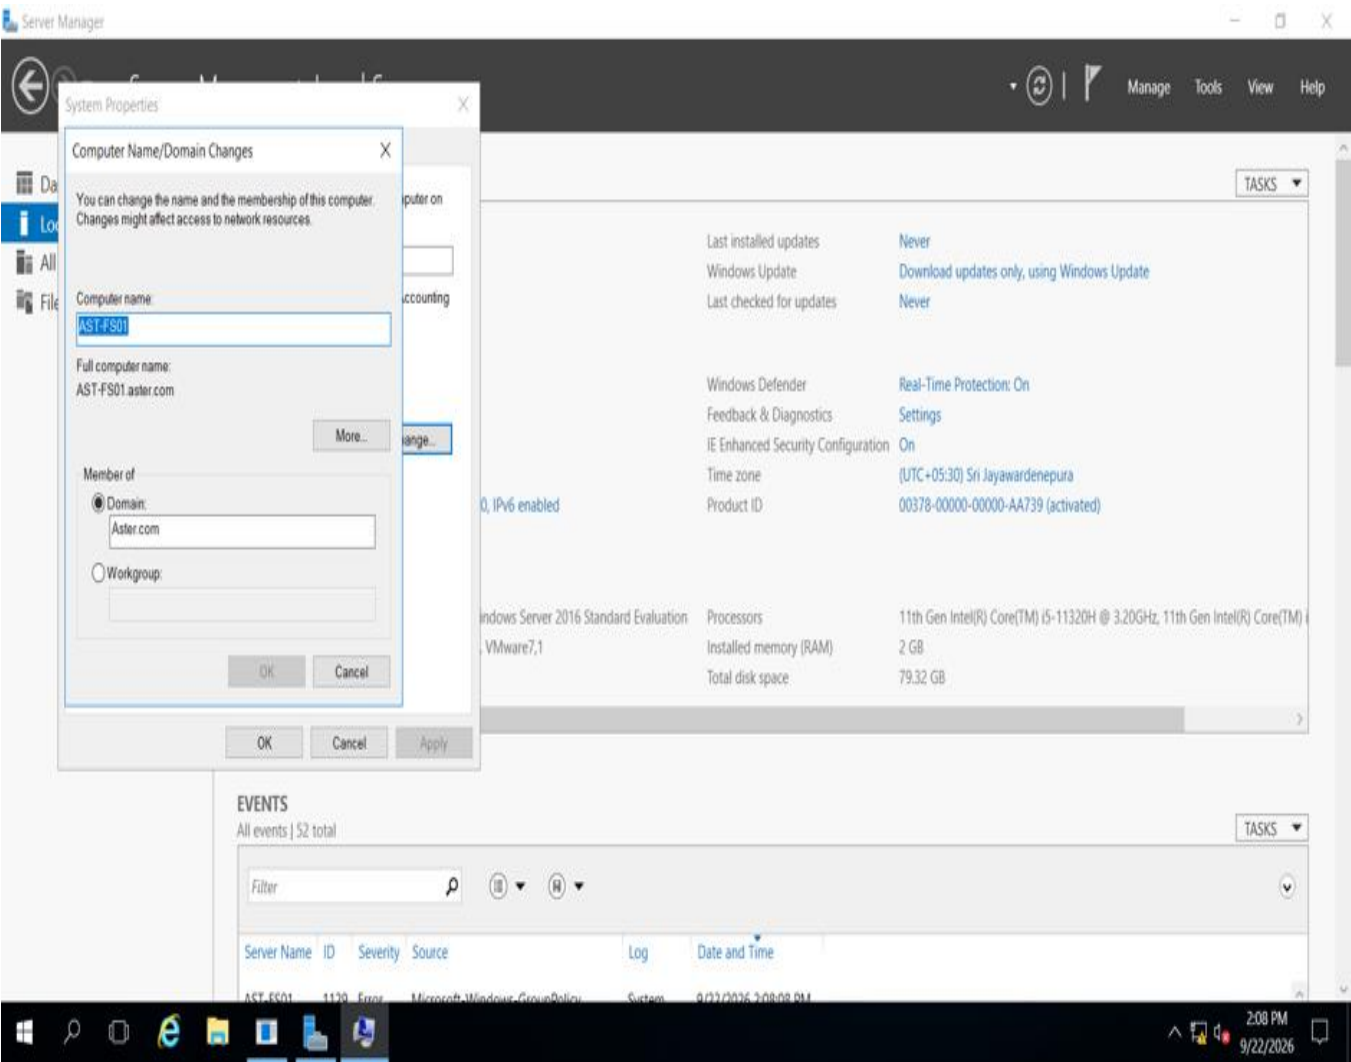

B07 — Create the forest and DNS service

Supplied screenshot evidence:

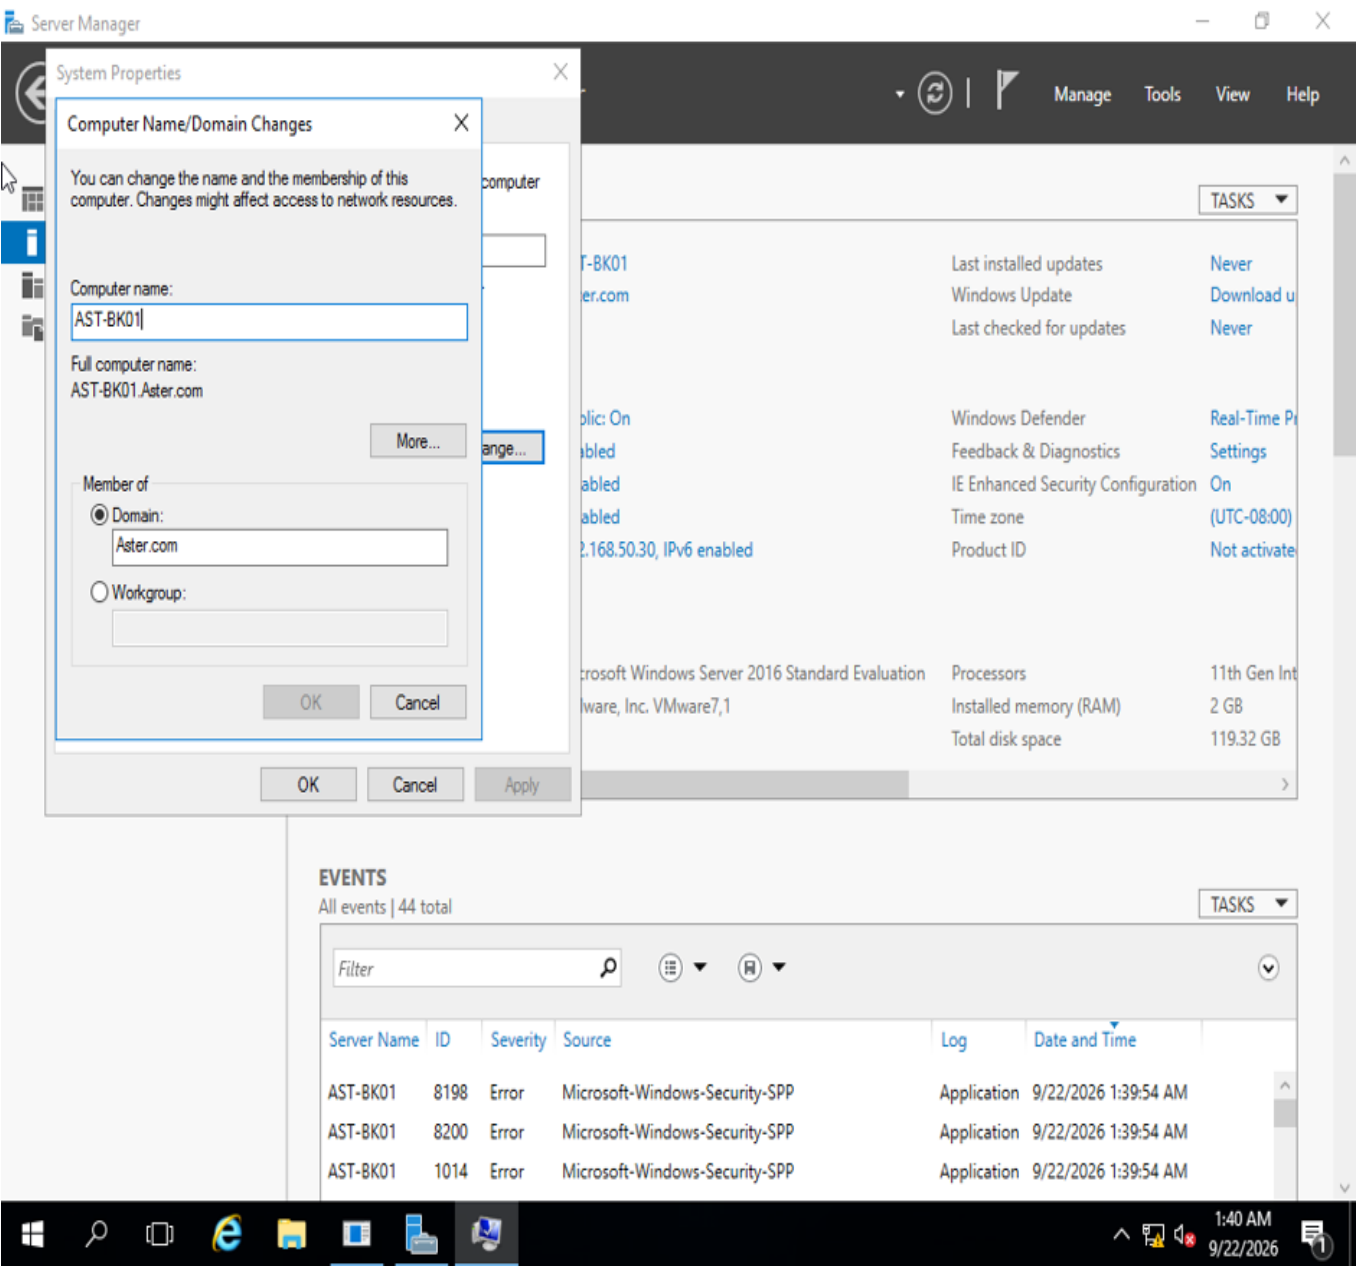

DNS Manager showing Aster zones.

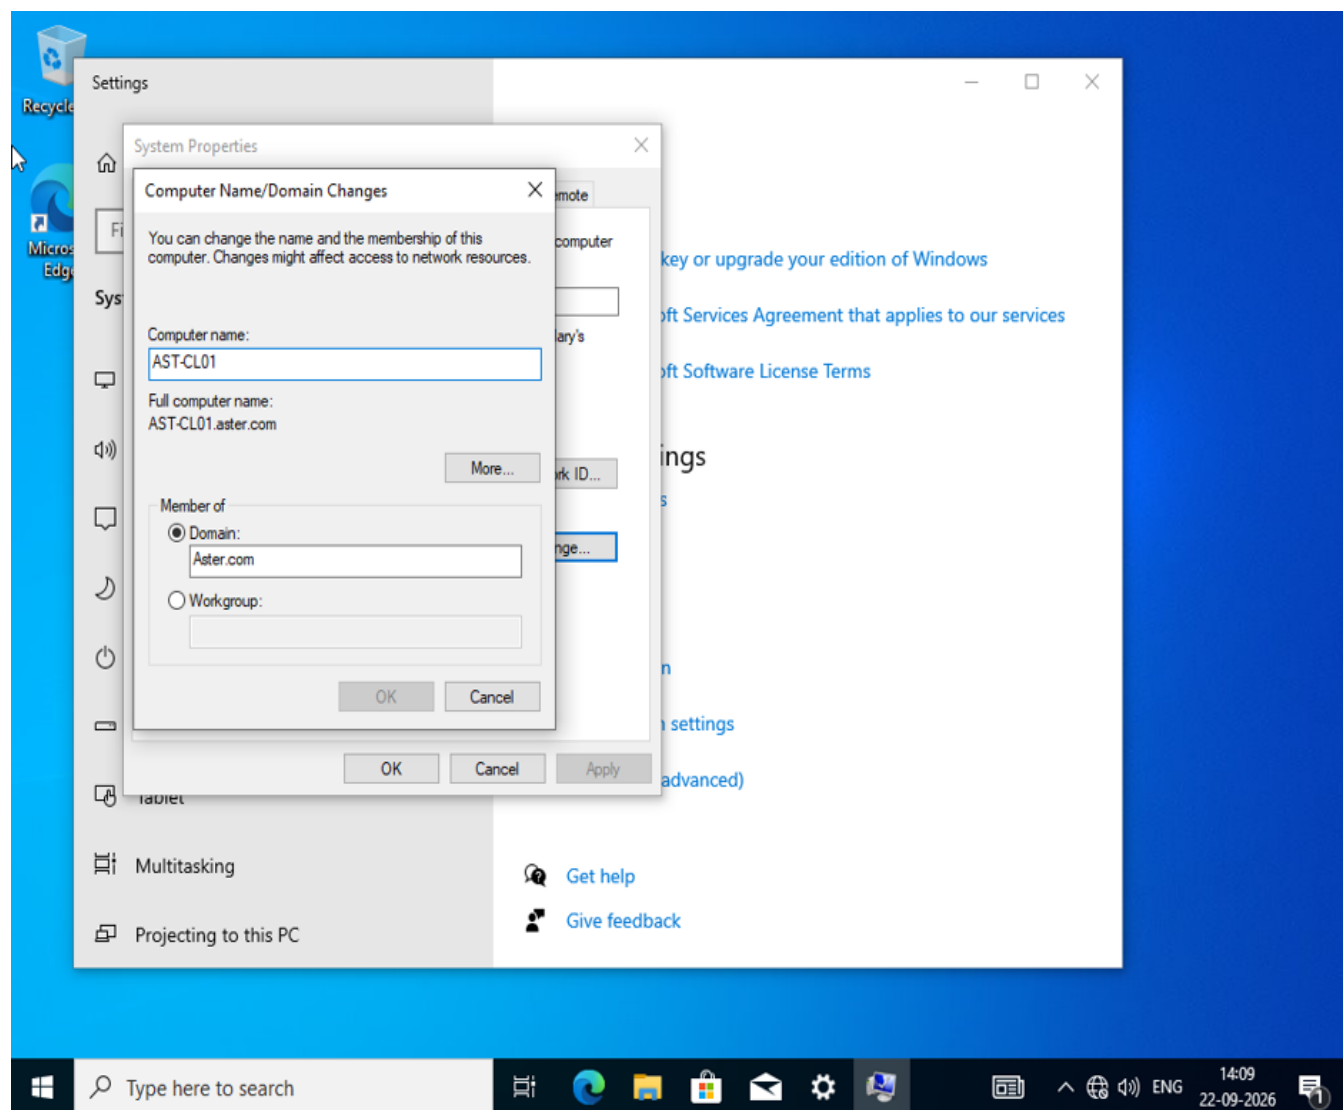

B08 — Join AST-FS01 to the domain

B09 — Join AST-BK01 to the domain

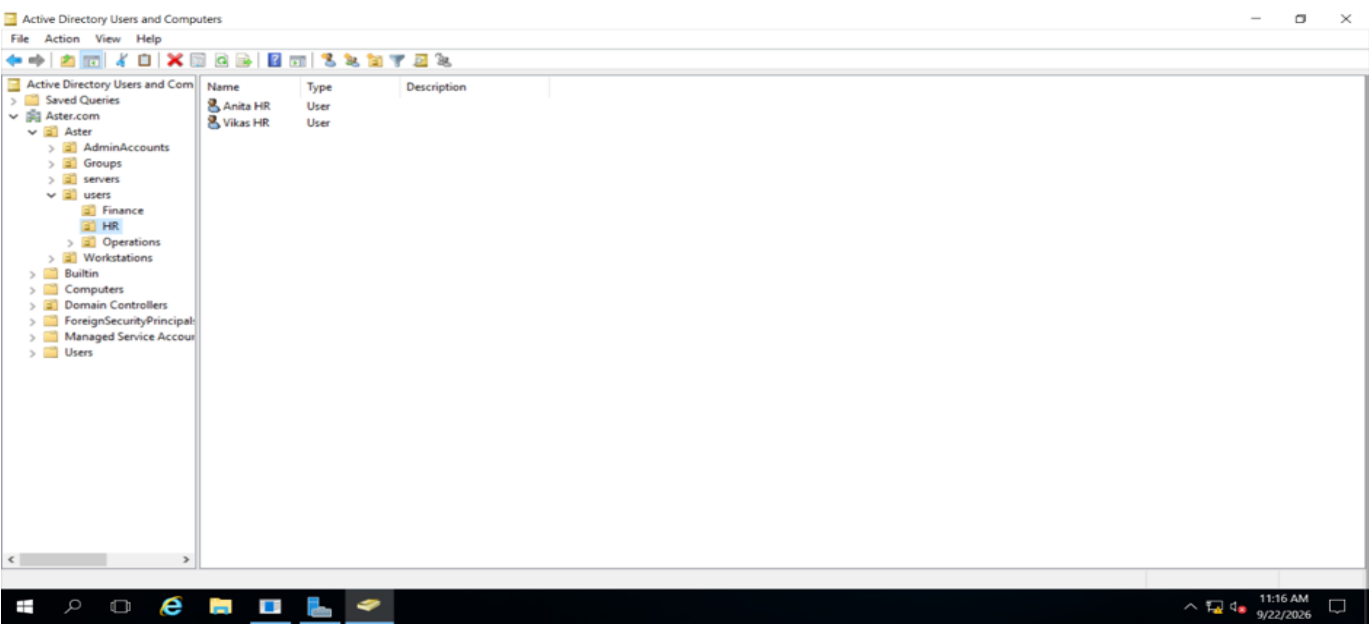

B10 — Join AST-CL01 to the domain

B11 — Create the organization and named accounts

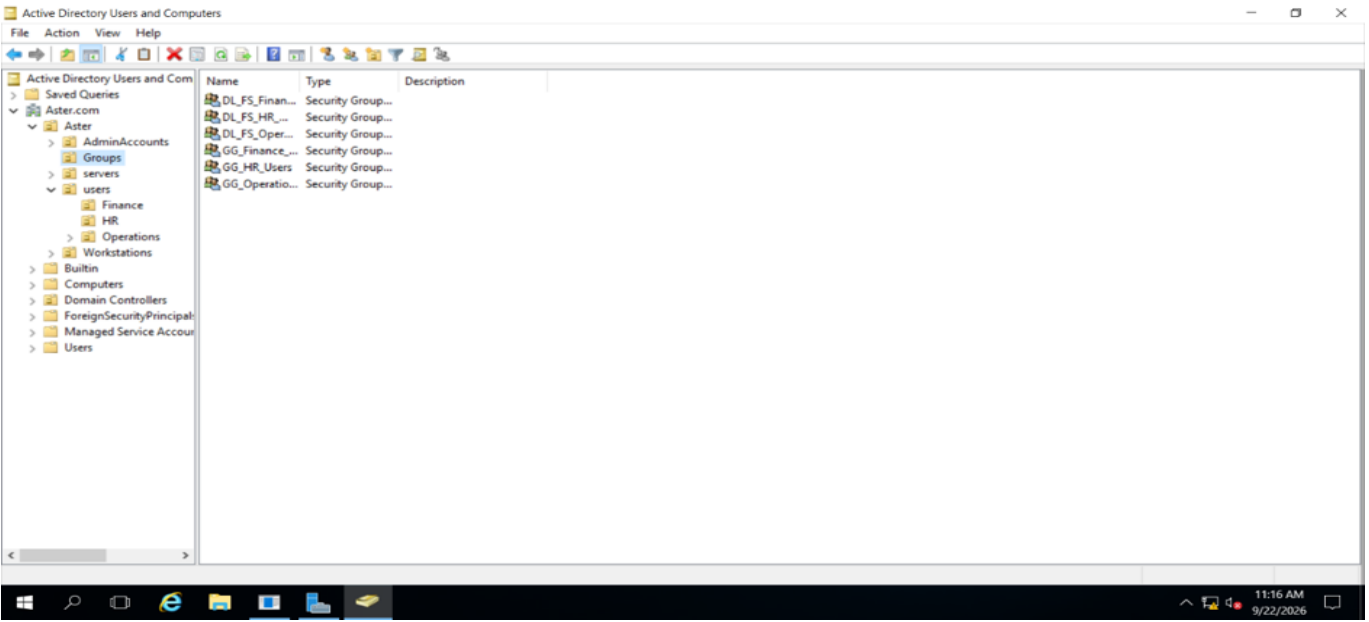

Supplied screenshot evidence:

Active Directory OU structure.

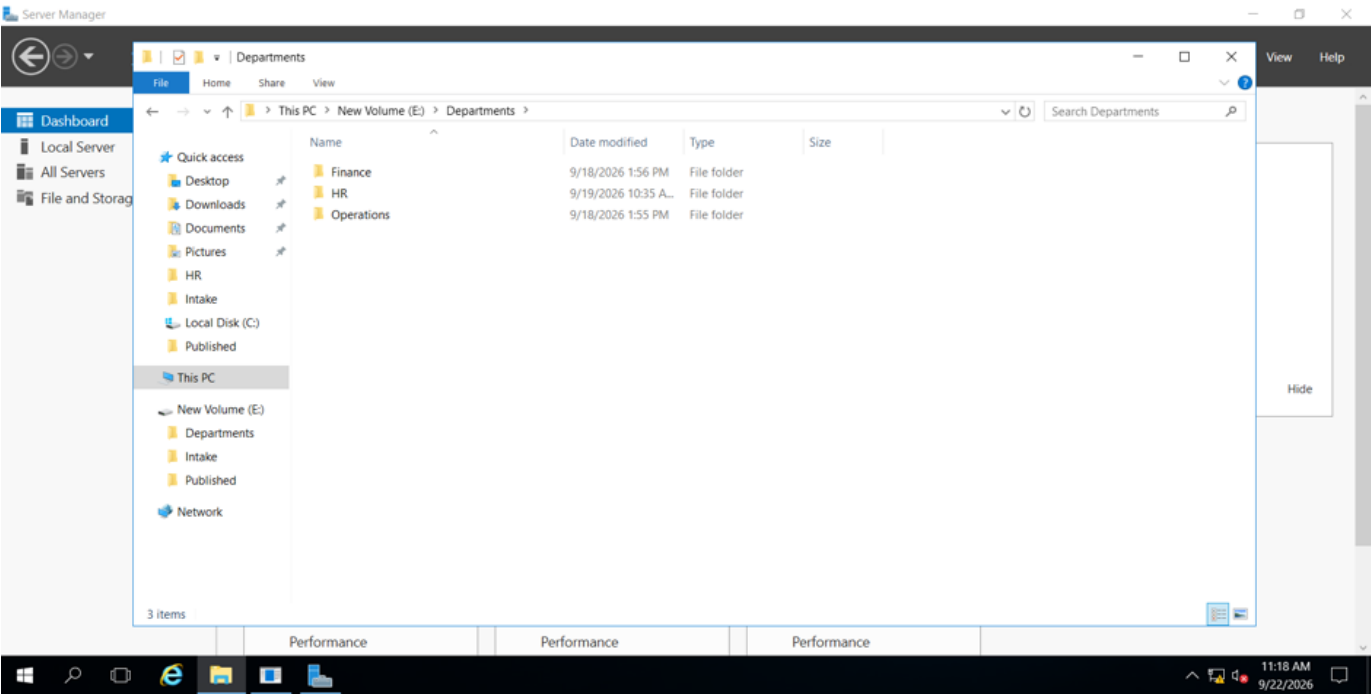

B12 — Build group based access assignments

Supplied screenshot evidence:

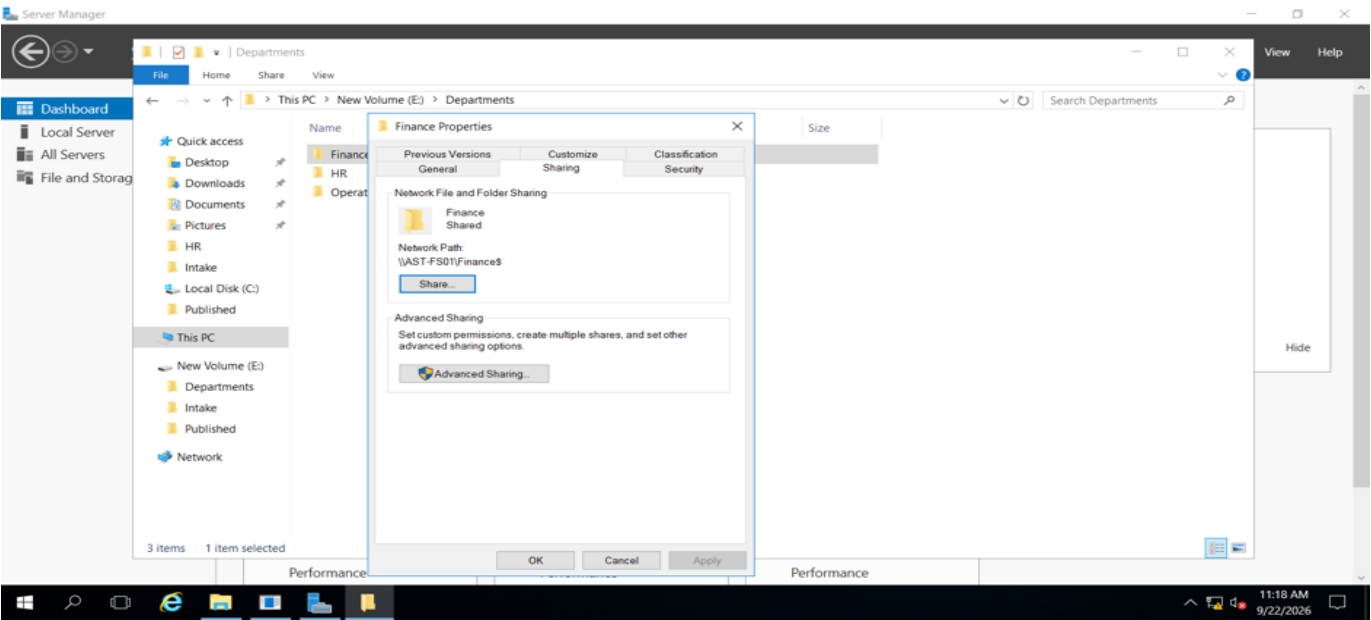

B12 — Publish three controlled departmental shares

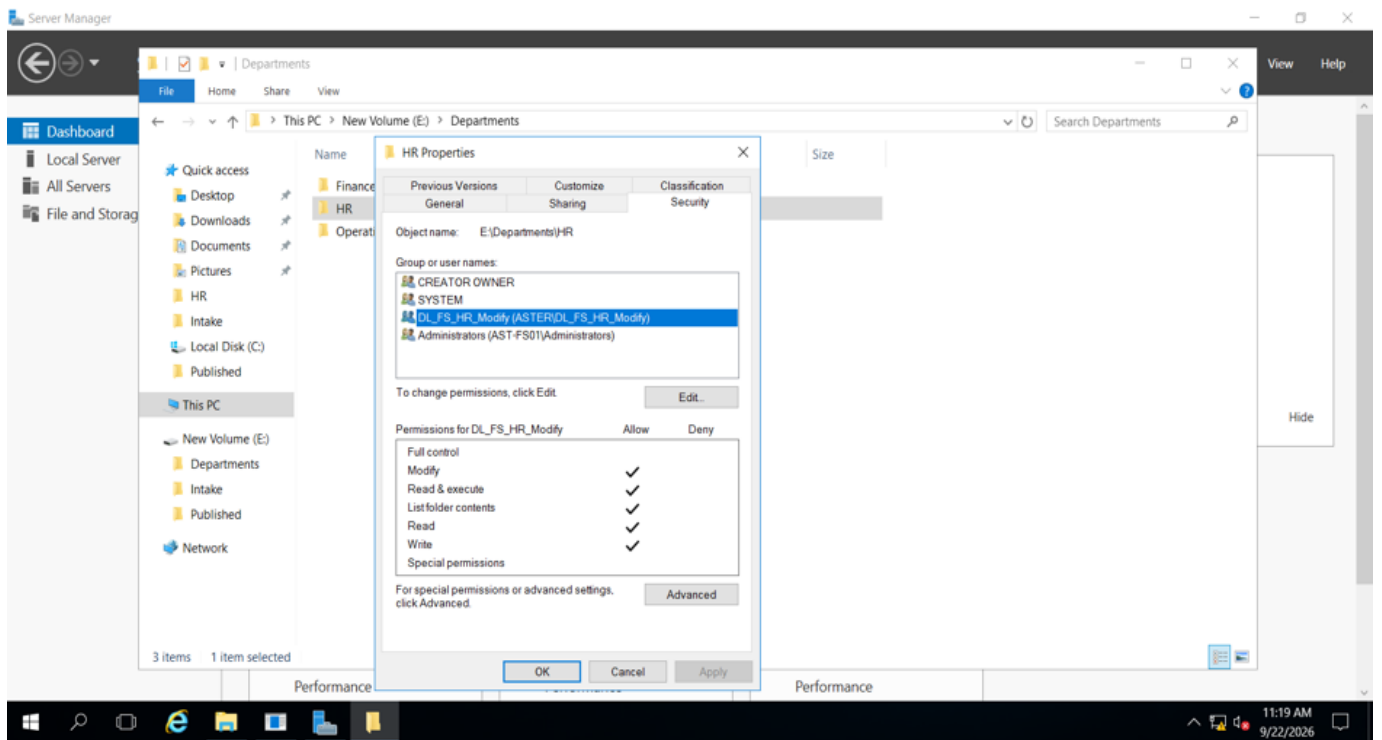

Supplied screenshot evidence:

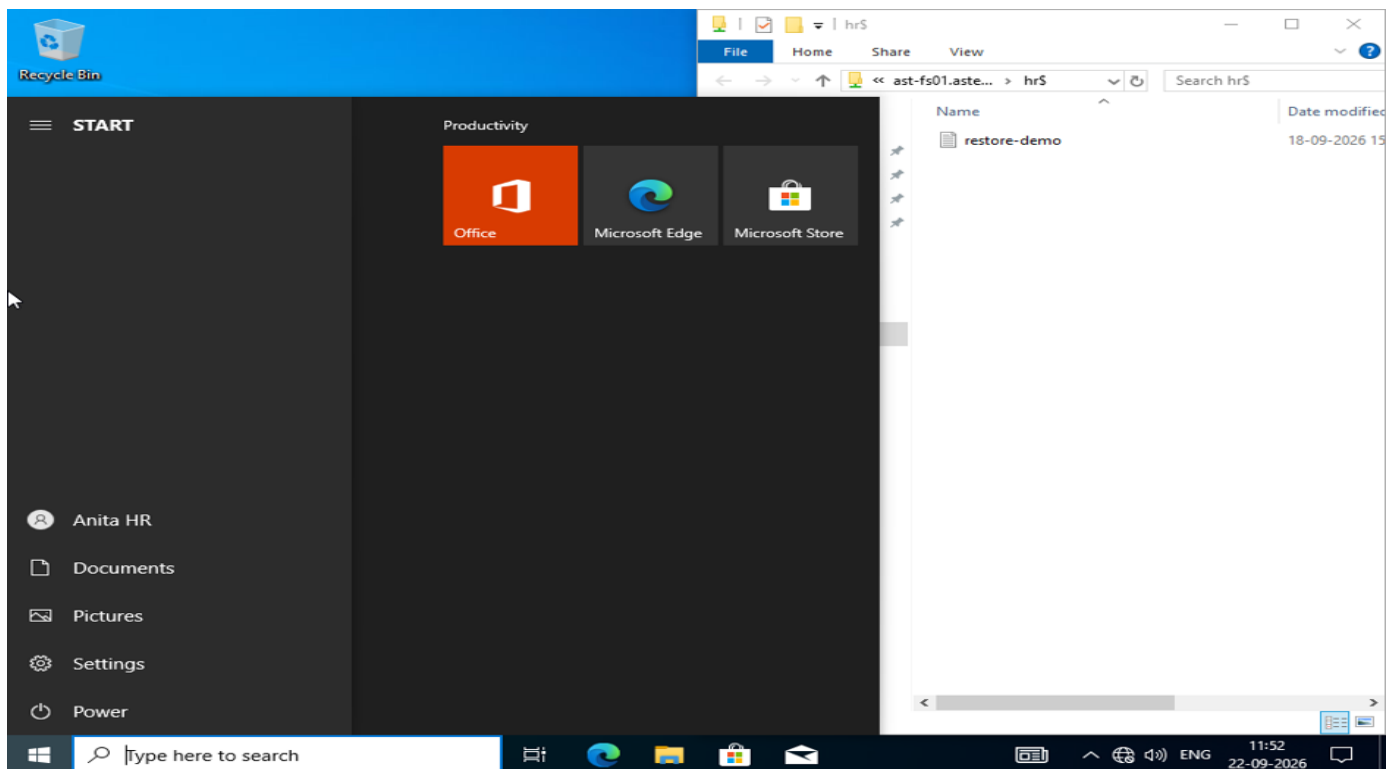

Department shares: Finance, HR and Operations.

Department share contents.

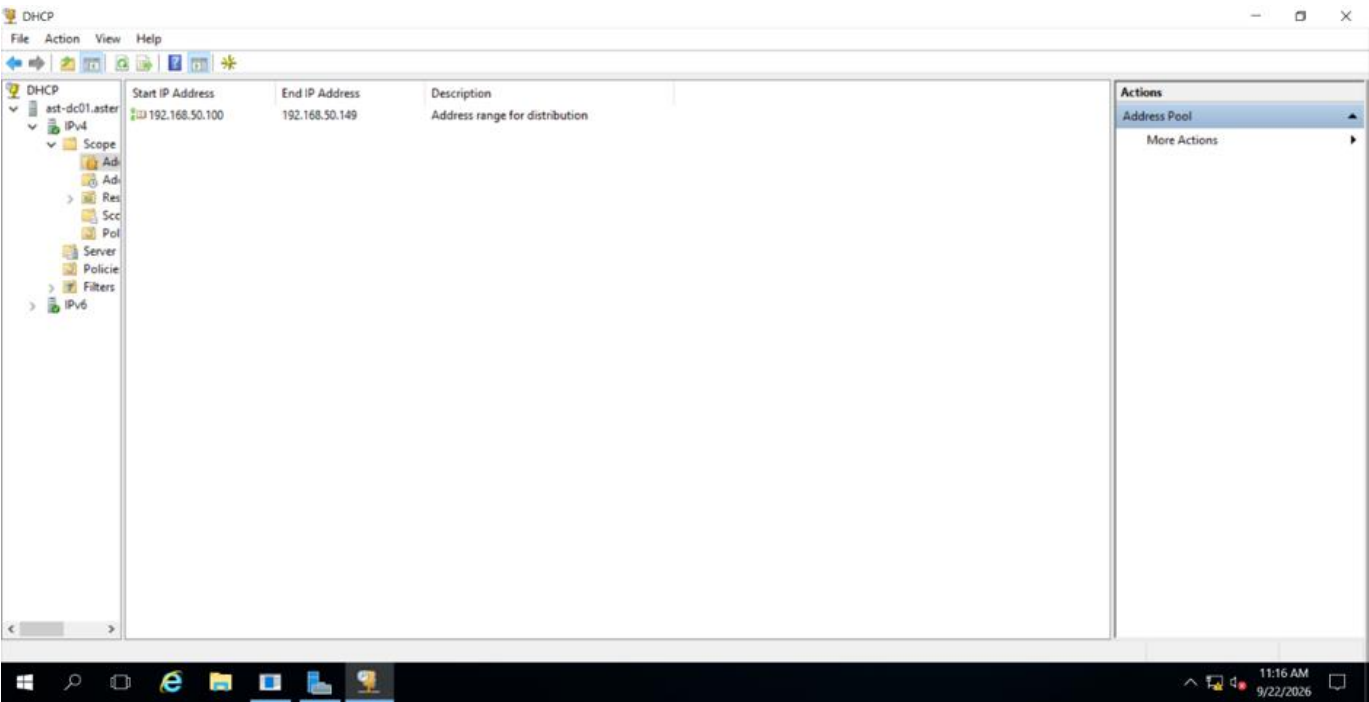

HR share properties, sharing and security.

B13— Install and configure DHCP

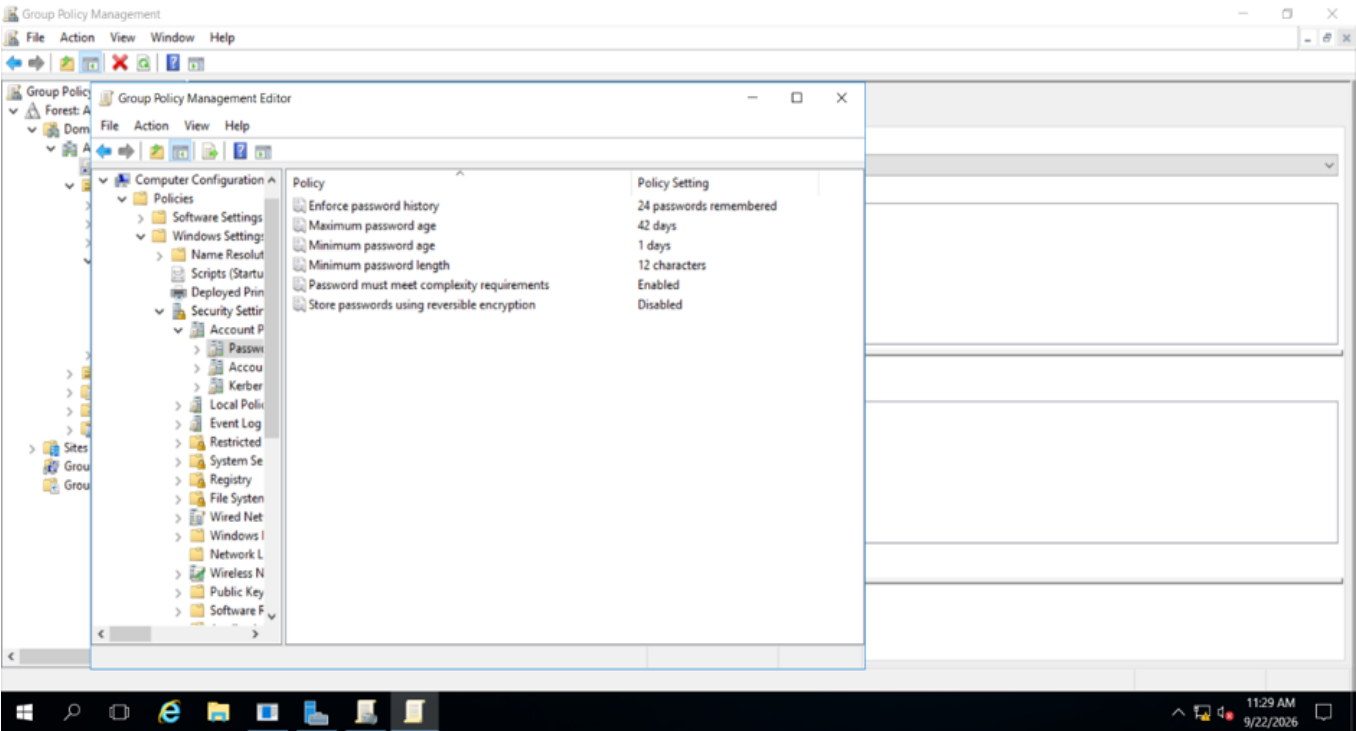

Supplied screenshot evidence:

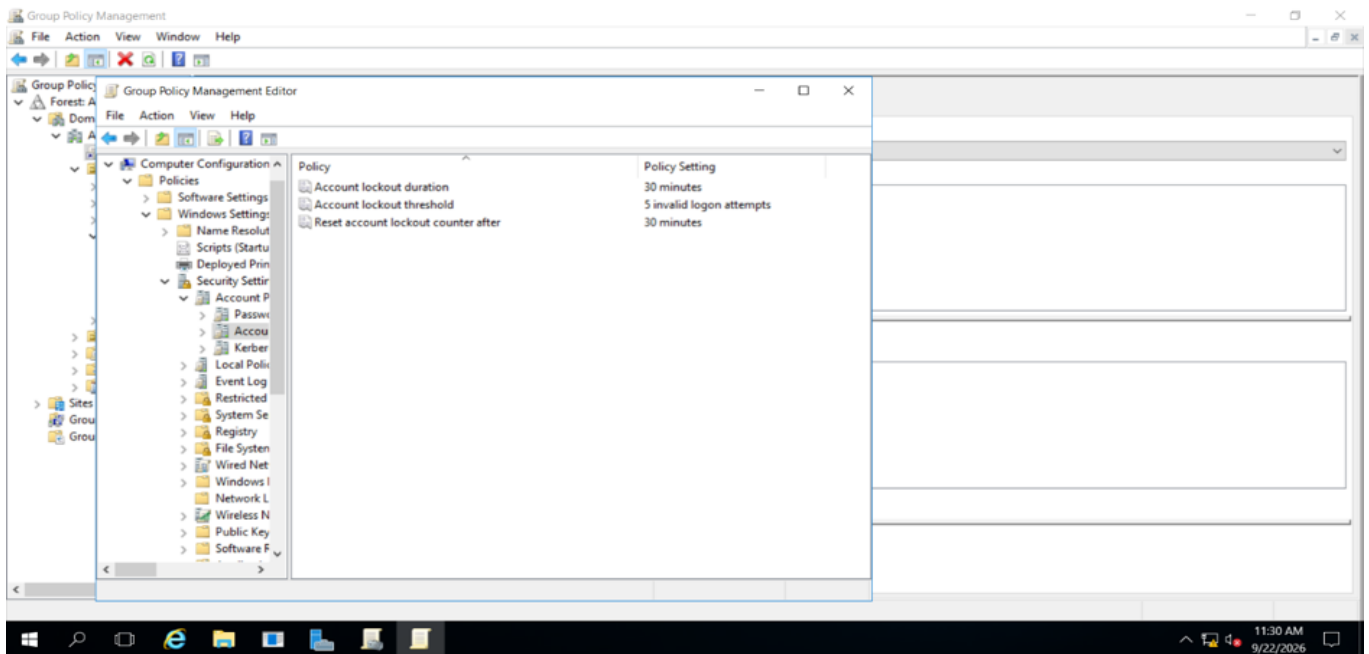

DHCP scope 192.168.50.100–149.

B14 — Set domain account policy and HR user policy

Supplied screenshot evidence:

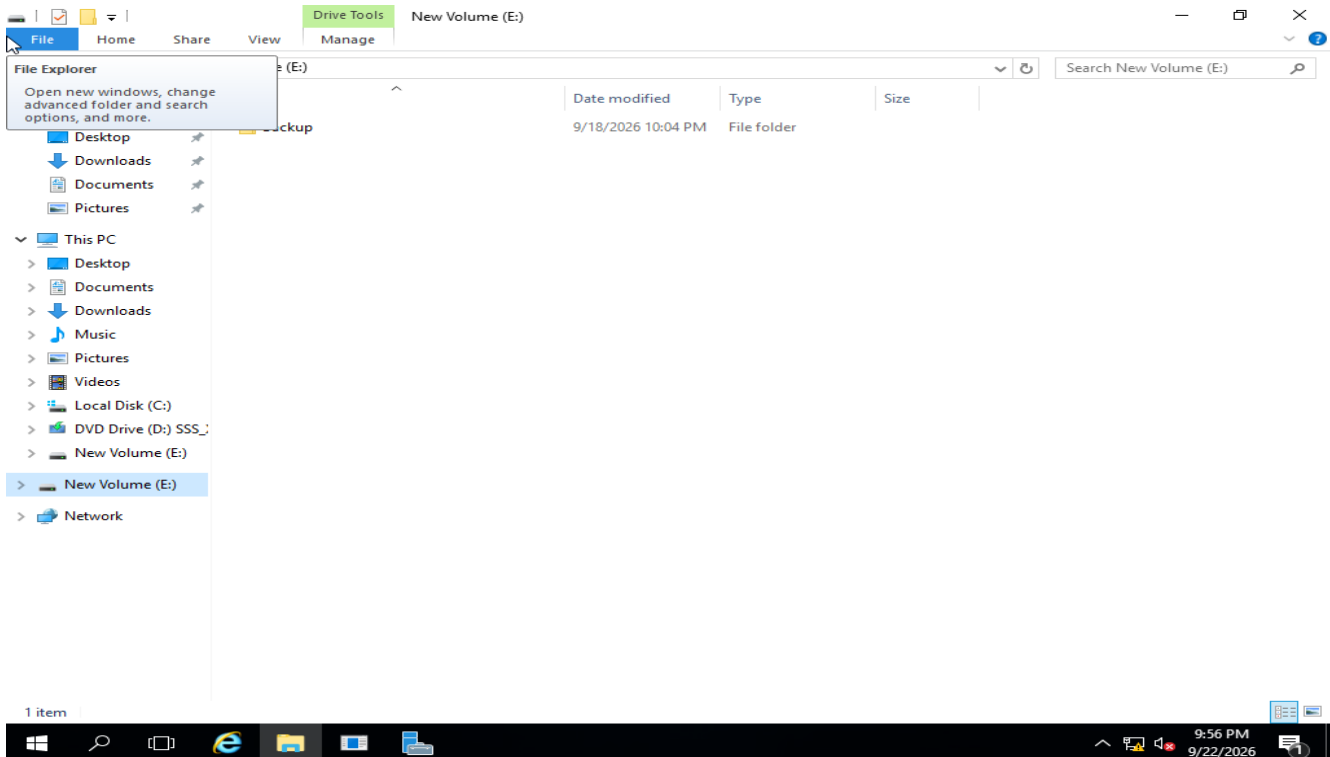

Group Policy password settings.

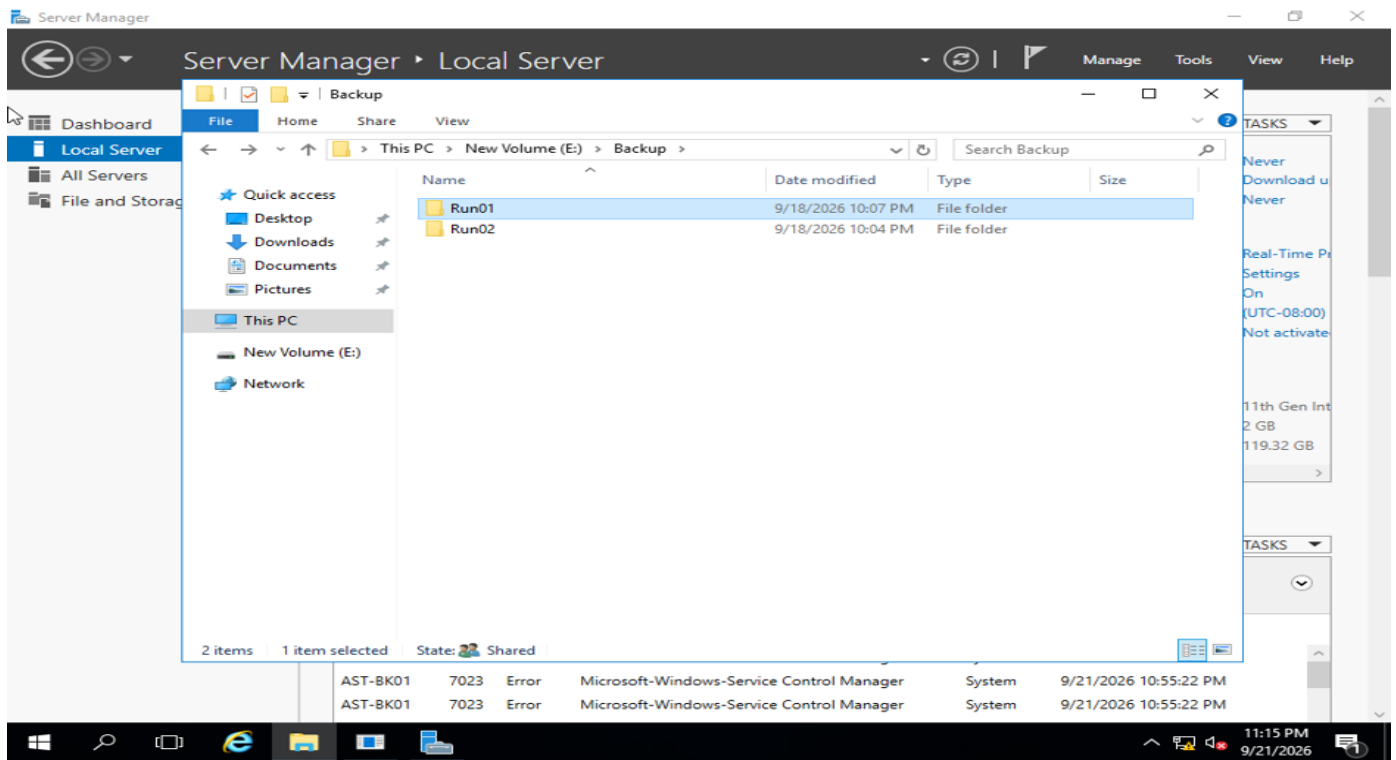

Group Policy configuration.

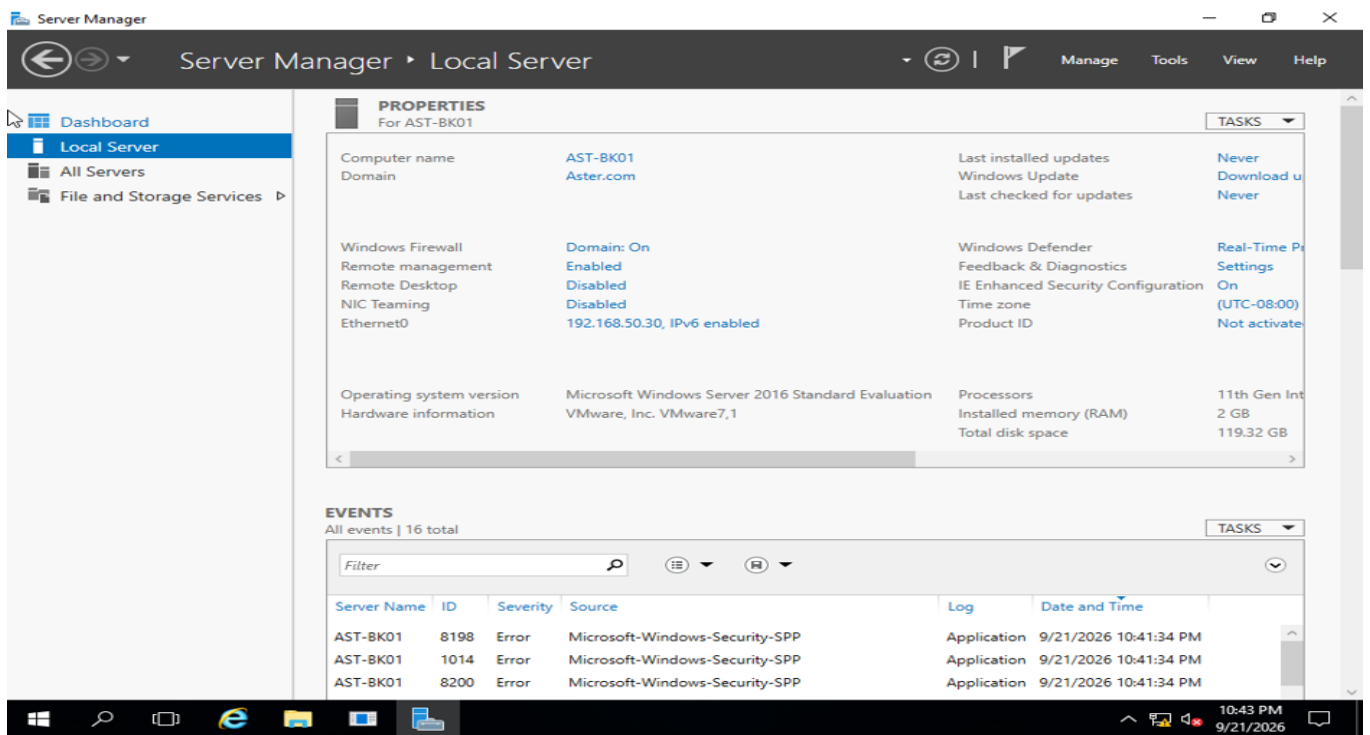

P1-01 — Prepare a restricted backup destination

Supplied screenshot evidence:

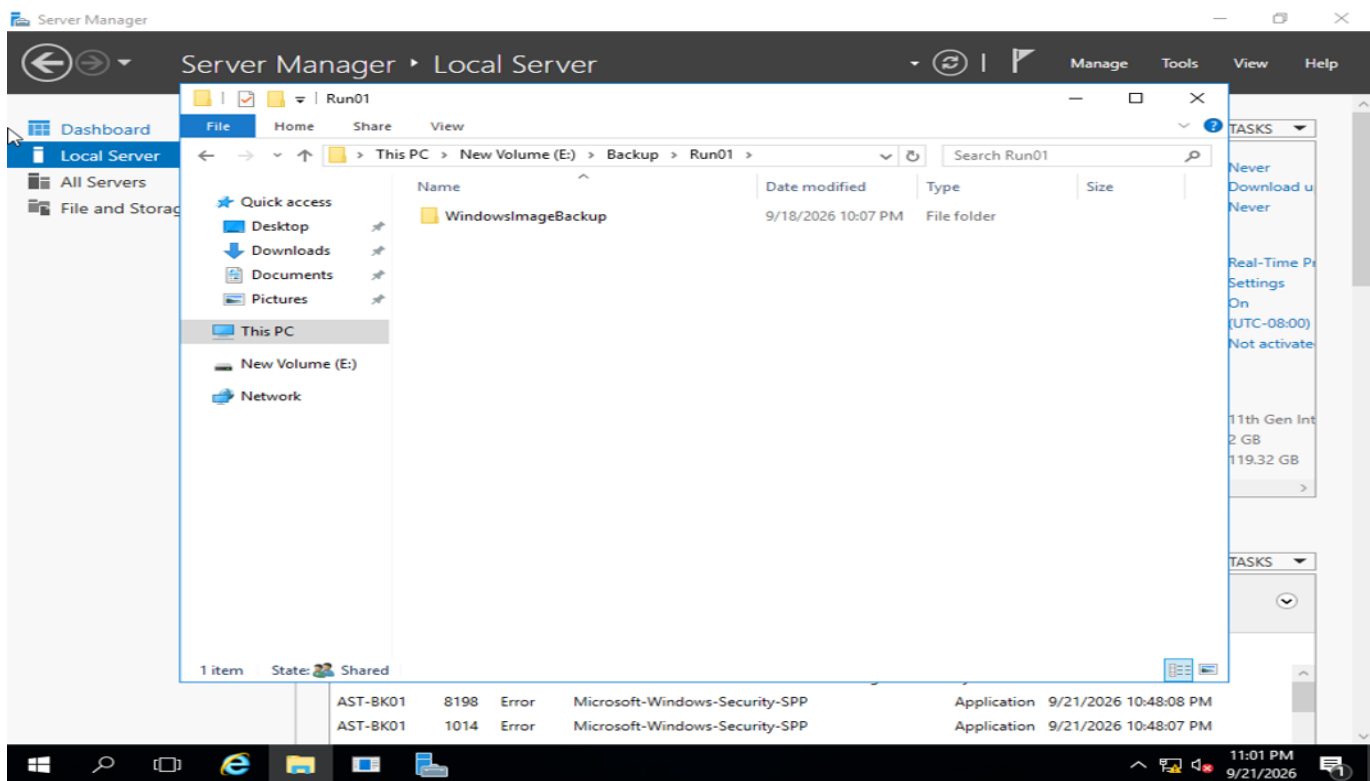

Backup folders showing Run01 and Run02.

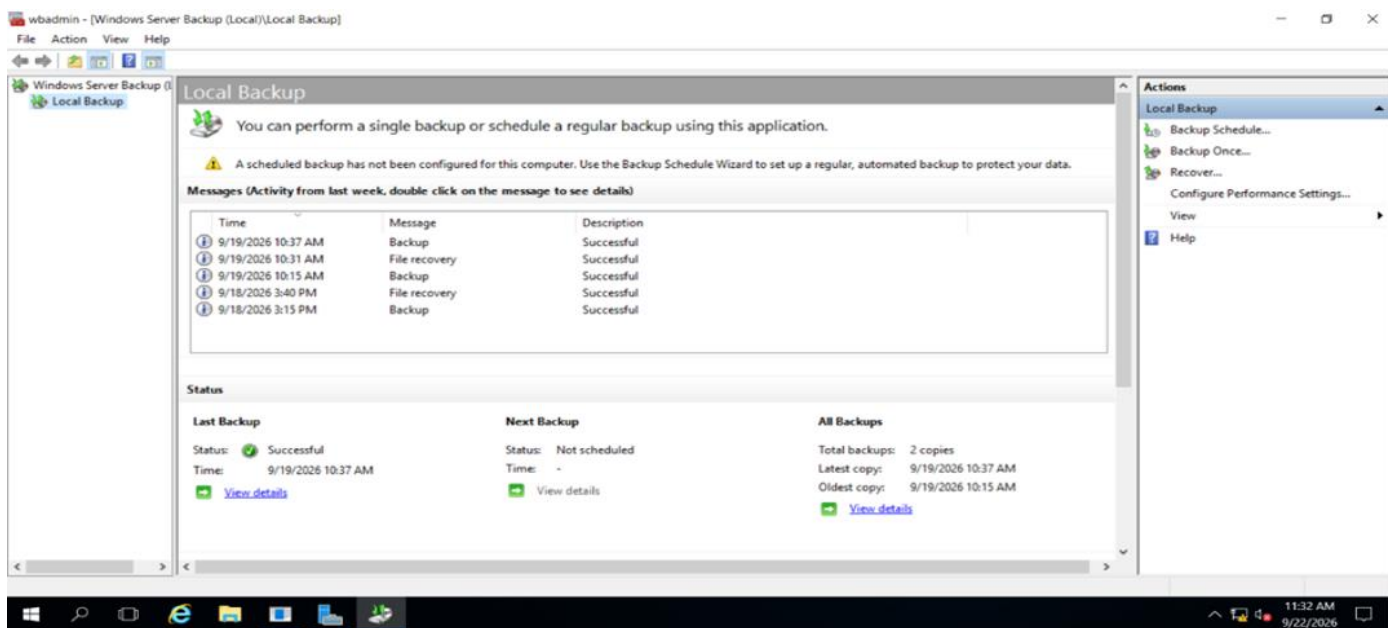

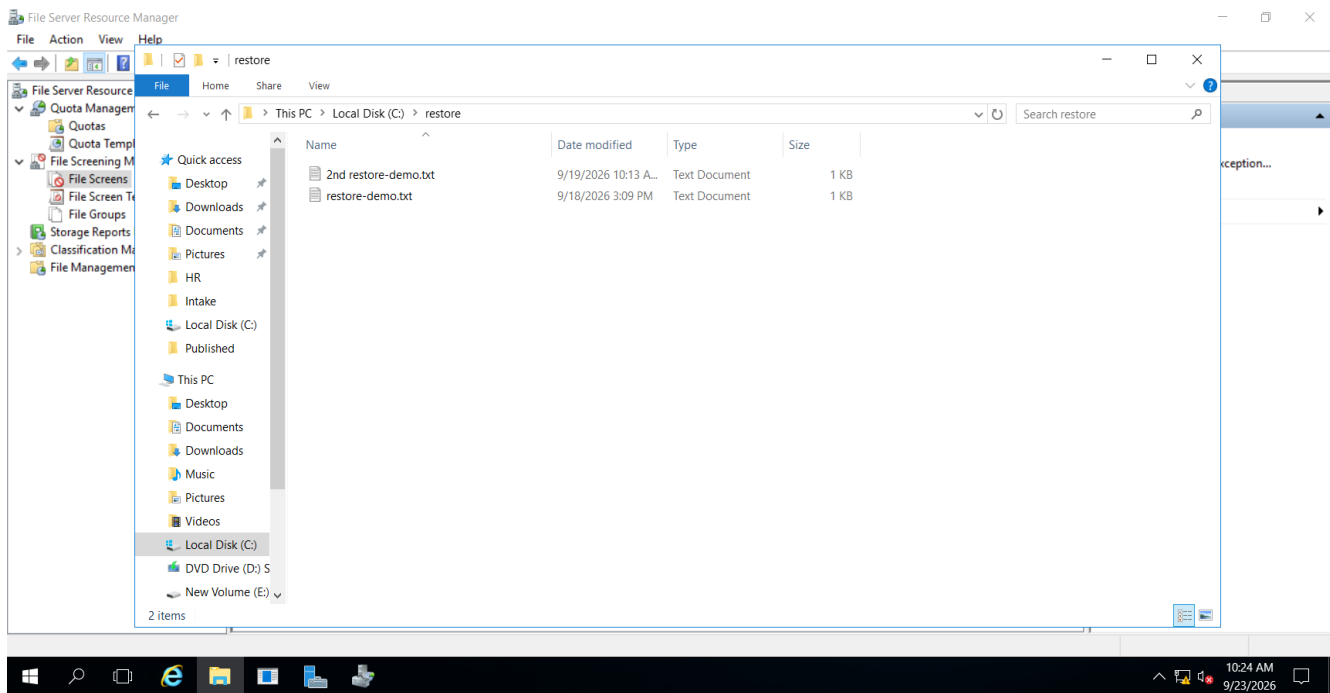

AST-BK01 Server Manager.

Backup target / department data.

P1-02— Delete and restore a file with integrity proof

Project Summary

This document contains screenshot evidence from my MCSA-P01 Windows Server lab implemented in a VMware virtual environment.

The lab included configuration and validation of Active Directory Domain Services, DNS, DHCP, file sharing, SMB and NTFS permissions, Group Policy, Windows Server Backup, and restore operations.

The screenshots demonstrate the configuration steps and validation results performed during the lab.

Key Skills Demonstrated

- VMware virtual machine management
- Windows Server administration
- Active Directory
- DNS
- DHCP
- SMB
- NTFS permissions
- Group Policy
- Backup and Restore
- Troubleshooting and validation

Project Type: Hands-on training/lab project
